## STANDARDS

### SCALES AND INDICATORS

Indicators have got blade terminals, scales have got rough and fine indexing

### SAFETY PRESCRIPTIONS

Measuring instruments comply with the standards ČSN EN 61010-1.

### CLASS OF ACCURACY

Measuring instrument comply with requirements of the standard ČSN EN 60051-1. Until otherwise specified, the accuracy class is 1.5, marked on the scale

### WORKING TEMPERATURE RANGE

These measuring instruments operates by convenient way at ambient temperature range  $-40^{\circ}\text{C}$  to  $+55^{\circ}\text{C}$

### VIBRATIONS AND IMPACTS

During its vibration test the instrument is exposed to 5 cycles with frequency wobbling in the zone 10 - 150 - 10 Hz at the cycle amplitude 0.15 mm.

The impact test consists of 3 impacts, each in the both directions in three mutually perpendicular axes with acceleration amplitude  $150\text{ m/s}^2$ .

### Acc. to kind of measuring system instruments are sorted like this:

1. Series MP 40, 80 and series MP 210, 220, 230 with the magneto-electric measuring system is determined for:

- measurement of DC voltage, or current
- temperature measurement in connection with an thermo-electric cell
- measurement of AC voltage, or current, in connection with a semiconductor rectifier the instrument measures the mean value, it is calibrated in the effective value at the 50 Hz frequency sinusoidal wave; upon an extra order voltmeters calibrated at the frequency range from 40 to 1000 Hz, ammeters up to 10A at the frequency range from 40 to 100 Hz can be delivered (other frequency should be settled with manufacturer)
- measurement of speed in connection with a tacho-generator

### ASSEMBLY POSITION

Required assembly position is shown on the scale, whilst the admissible deviation from this position is  $\pm 5^{\circ}$  and an error caused by it (together with the measurement error) must not exceed the error accordant with the instrument accuracy class.

### SENSE OF POSITIONAL MARKS

Required position should be presented always, if different from vertical

1 :  $\angle \infty > 90^{\circ}$       3 :  $\angle \infty < 90^{\circ}$   
 2 :  $\perp \infty = 90^{\circ}$       4 :  $\square \infty = 0^{\circ}$

### Description

Instruments type MP 40, 80 have quadratic frontal shapes, instruments MP 210, 220, 230 have oblong shapes. Casings of panel instruments are made of self-extinguishing plastic material acc. to standard UL 94.

The magneto-electric measuring mechanism, fastened on the cylindrical tube, has got its magnetic circuit with inner permanent magnet. Lodgement of the magnetic circuit is of tip-type.

Instrument dial is white, print of scales and the pointer with blade are of black colour.

## SYMBOLS OF THE INSTRUMENT SYSTEM

Applied measurement system is branded by following symbols

### Symbol

	Magne toelektrický přístroj
	Magne toelektr. Přístroj s pol. usměrňovačem
	Elektromagnet. přístroj
	Uzemění
	Pozor! Viz návod k obsluze
	Střenosměrný proud
	Střídavý proud
	Střenosměrný a střídavý proud

(Magneto-electric instrument  
 Magneto-electric instrument with semiconductor rectifier  
 Electro-magnetic instrument  
 Grounding  
 Attention! See Instruction Manual  
 DC current  
 AC current  
 DC and AC current)

The zero position of the indicator is on the left, or in the middle, adjuster of the zero position is located on the instrument front face.

Inlets for electric connection of the instruments are available on the rear side of the casing. Instrument of series MP 40, 80 have got their inlet clamps with soldering eyes. Series MP 210, 220, 230 with a big tube has got its screw outlets, execution with a small tube is equipped with flat pins. The positive clamp is marked by +. The flat pins enable soldering of Cu conductors up to cross-section max.  $0,75\text{ mm}^2$ . (Soldering time max. 5 s), or connection by means of slip-on ferrules 2,8 type 7100-01.

Instruments type MP 210, 220, 230 are sold in on-panel, or under-panel executions.

## VARIANTS OF SCALES

Following 9 scales can be used as examples of available variants:

[1] Scale for magneto-electric ammeter DC

[2] Scale for magneto-electric voltmeter (measurement of AC voltage)

[3] Scale for magneto-electric ammeter with central zero point

[4] Scale for thermometers

[5] Scale for speedometers

[6] Scale for ammeters with two ranges

[7] Scale for electro-magnetic voltmeter (for measurement of AC voltage)

[8] Scale for electro-magnetic ammeter

[9] Special scale for measuring instruments

# Common technical parameters of series MP

## Common technical data

Measuring mechanism	magneto-electric	
Thermal coefficient	10% accuracy class/K	
Safety requirements	as per ČSN EN 61010-1	
Class of instrument protection	II	
Degree of soiling	2	
Category of over-voltage in installation	MP 40, MP 210 CAT II	MP80, 220, 230 CAT III, or CAT II
Working voltage	300V	300V 600V
Testing voltage	2,3 kV <sub>ef</sub> 50/60Hz	2,3kV <sub>ef</sub> 3,7 kV <sub>ef</sub> 50/60Hz
Overload rating	as per ČSN EN 60051-1	
Electro-magnetic compatibility	as per ČSN EN 61326 – 1 (1997) Testing requirements Table 1, criterion of operation A	
Coverage		
front face	IP 52	
inlet clamps	IP 00	
Mechanical immunity	as per ČSN EN 60068	
operational vibrations	10Hz – 55 Hz – 10Hz, oscillation amplitude 0,15 mm	
immunity against accidental impacts	18 impacts 150 m/s <sup>2</sup>	
immunity against impacts at transport	3 x 1000 impacts 100 m/s <sup>2</sup>	
Nominal range of application	as per ČSN EN 60051-1	
temperature	-40 to +60°C	
relative humidity	25 to 80% at 23°C	
pressure	70 to 106 kPa	
frequency of alternate variables	50Hz ± 10%~	
position	vertical ± 5%	
Climatic immunity	as per ČSN EN 60051-1	
immunity against low temperatures	-40°C	
immunity against higher temperature	+60°C	

By AC ammeters of their range 100A to 60 mA measurements in the guaranteed accuracy class can be performed, providing that the AC electric circuit has got its voltage minimally 24V. By application of these data the minimal impedance of the measuring circuit can be calculated.

For suppression of electro-magnetic interferences the inlet conductors to the instrument must be twisted with density from 8 to 10 twists/10 cm, made as Cu tinned wire of its min. cross-section 0,75 mm<sup>2</sup> for the conductor length 1m (ammeters with their shunts assembled on the instrument casing are not concerned there).

### Special design of:

- range
- inner resistance
- print of dial
- middle position of pointer
- right-hand position of pointer
- blade-type pointer
- calibration at different frequency than 50Hz
- shock-proof execution
- special execution

Instruments with their small tubes Ø26 mm (MP210, MP220, MP230) are, at the ranges 1A to 6A, or (±1A to ±6A) with separated non-covered plate of accessories. The range xA/60mV, or (±xA/60mV) enable enlargement of ranges by means of exchangeable shunt restricted to 10,15,25A, or ±10, ±15, ±25A only.

Instruments with their big tubes Ø55mm (MP 220-T, MP 230-T) are, at their ranges 10A to 60A, or (±10A to ±60A) designed with the shunt on the instrument tube outer surface. The range xA/60 mV, or ±xA/60mV enable range enlargement by means of a separated exchangeable shunt (4A to 10kA)

Ammeters xA/60mV, or ±xA/60mV are calibrated with their connecting Cu line 2 x 0,2 m, cross-section 0,75mm<sup>2</sup> · i.e. max. 0,01Ω. Also a different resistance can be calibrated, but max. 1Ω. Exchangeable and restricted exchangeable shunts are not comprised into the delivery, they must be ordered extra.

The range xkV/100V enables enlargement of voltage ranges by means of the external measuring voltage transformer, which is not comprised into the delivery. Instruments with their tubes  $\varnothing$  26 mm (MuP210, MuP220, MuP230) are, at all ranges, equipped with separated non-covered plate of accessories.

## Speedometers

### APPLICATION

These instruments are designed for remote permanent speed measurements of machines, used in industrial plants. The speedometers are usually calibrated in shaft revolutions of the measured machine. However, the scale can be calibrated even in different variables, depending on the speed, e.g. travel speed, feed speed, output, quantity etc. Therefore, the speedometers have their multilateral use.

The electric remote speedometers have got two main parts:

1. transmitter (small generator)
2. measuring instrument – speedometer

### DESCRIPTION

The transmitter – small tacho-generator has got its firm winding in the circular stator and 6-pole rotor, created by the permanent magnet. Speed of the measured machine shaft are transferred mechanically on the small generator, producing AC current, whose voltage and frequency are directly proportional to the speed of the shaft, which can be then measured by voltmeters, whose scales are calibrated directly in rpm, or in meters/sec. At 1000 rpm the generator voltage is about 30V with frequency approx. 50Hz. At a higher speed, the voltage and even frequency are proportionally higher. Maximal permanent current load is 20mA, so that up to 4 instruments can be connected in parallel to one small generator. The instruments with their range 400 rpm and 600 rpm are equipped with an additional condenser for damping of the indicator vibration.

The small tacho-generators are reliable and safe in operation, because they have no commutator brushes. The are not exchangeable, therefore they must be individually calibrated with the instrument. Sense of rotation has no influence on the measurement. Resistance of the connecting line up to the value 50Ω has no influence on the measurement accuracy.

Instruments with their tube  $\varnothing 26$  mm have got all their ranges with separated non-covered plate of accessories. The small tachogenerators are not comprised into the delivery.

### Kinds of tachogenerators

Type	Execution	Voltage at	Weight c. kg
J 13A1	With sprung coupling	50V $\pm$ 4V	0,9

Shaft of the measured machine is connected mechanically with the tachogenerator rotor. On its output clamps the AC voltage proportional to speed will be measured. The scale of the indication instrument is calibrated directly in rpm. Tachogenerators are not exchangeable, they must be calibrated together with the indication instrument. Sense of rotation has no influence on the measurement. Resistance of the connecting line up to the value 50 $\Omega$  has no influence on the measurement accuracy.

TYP J13 A1

Interconnection scheme between the indicator and the tachogenerator

## Accessories for instrument assembly

Assembly on panel

for types MP210, MP220, MP230

## ORDERING OF PANEL INSTRUMENTS

### FOLLOWING DATA MUST BE SPECIFIED IN AN ORDER:

- name and type of the instrument
- number of pieces
- measuring range, contingently also ratio of transformer
- shock-proof execution
- number of replaceable accessories, if required
- (replaceable, or restricted replaceable shunts, voltage dividers)
- number of accessories for assembly behind panel, or above panel
- term of delivery
- delivery destination

### SPECIAL REQUIREMENTS:

- accuracy class 1,5 at instruments MP40, MP210
- working position different from vertical
- calibration at frequency different from 50Hz
- furthers symbols, or other marking of the dial
- package different from standard one
- resistance of inlets for the ammeter connection to the shunt, if different from 0,01  $\Omega$
- Calibration record, if required

### RANGE OF DELIVERY:

- panel instrument
- Guarantee certificate
- transporting packing
- required accessories
